

Electrical Installation

Tech Asset Management engineers have extensive knowledge and experience of all types of electrical installation. From commercial and industrial buildings, to retail outlets and office complexes, including extensive experience in hospitality and care industries.

Our experience in all areas of electrical installation includes:

- Voltage Optimisation, a versatile technology providing substantial energy savings
- Low Voltage Power and Lighting installations
- Three phase distribution networks
- Mains distribution design, installation and replacement including:
 - o Air circuit breakers (ACB)
 - o Moulded Case Circuits Breakers (MCCB)
 - o Sub metering
 - o BMS integration
- Control Panel design and build, installation and commissioning
- High Voltage equipment installation and maintenance

Tech Asset Management is fully approved by the NICEIC in order to ensure compliance with all relevant regulations and legislation. We are included on the UK Electrical Safety Register, managed by the industry's leading bodies to help promote safe working practices in the electrical industry.

We offer full project management for installations, from concept to completion and certification.

All of our engineers are fully qualified to high standards by City and Guilds with years of experience and specialise in the finishing touches that ensure the quality of an installation.

We can also provide quotations to carry out electrical remedial works to rectify any defects found during periodic inspections to improve an existing installation to a good standard and ensure compliance and certificate it for safe continued use.

"All our engineers are fully qualified to high standards by City and Guilds with years of experience."
